

**Testimonial 2010
Clare Neumann**

FES, provided by Dr. Sheila Schils, has been an integral part of all three of my horses' fitness and training programs over the past 5 years.

"Landon"

My daughter's show hunter, Landon, is an 18h Westphalian. I believe his regular treatments greatly contributed to injury prevention, especially because of his size and frequent show schedule. In the four years we owned him, he never had an injury. I feel the treatments also contributed to his beautiful movement.

"Foxy"

I got my mare, Foxy, when she was 8 years old. Her topline was quite tight which contributed to her low, heavy front end and caused stress on her front feet; as well as her hinds being quite a bit out behind her. Over the next 4 years her regular FES treatments loosened her neck, shoulders and back, allowing her to step under herself and taking pressure off her fronts. There has been a dramatic change in her appearance, as well as a huge improvement in her movement and jumping ability.

Foxy before FES

Foxy 2010

"Spectrum"

My horse, Spectrum, was a breeding stallion for many years before I owned him. FES has kept his sacrum area symmetrical and aligned.
